Alphabet Game

Your task is to create an alphabet game. The kind of game a little kid would play. When playing the game, when the user clicks on a letter, the game will change the letter sprite to a food, animal, etc. that begins with that letter.

Some of the blocks you will want to be able to use for this are:

- When green flag is clicked
- When Sprite clicked
- When_key pressed
- Switch to costume_
- Say_for_sec

You can use the internet and import .gif or .jpg files from the internet and edit them in paint to use with your project.
