

Web 2.0 Applications Jigsaw

This activity will be performed in 3 groups. Each group will examine a different Web 2.0. The three applications we will examine are:

- Social Bookmarking Sites (delicious.com or stumbleupon.com)
What are the differences between ranking based and social bookmarking search engines?
- Word Cloud Site (wordle.com)
Why would you want to create word clouds?
- List Creation Site (wunderlist.com)
What are the advantages of using wunderlist? Disadvantages?

Each group should:

- Set up an account in the application.
- Explore the site and its features.
- Prepare a presentation on the site to present to the class.

You will have 20 minutes to explore individually

10 minutes to brainstorm and put together the highlights for the presentation.

Presentations should be 5 minutes and include any other similar Web 2.0 apps you know of that will perform the same task.

Each individual should take notes in their journal during the presentations. You will be responsible for knowing the terms and what each one does:

- Web 2.0
- social bookmarking search engine
- ranking based search engine
- word cloud site
- list creation site
